

2000 BC Student Outcomes: Summary of Survey Results by Program Area

Ministry of Advanced Education,
Training and Technology

OWG

Outcomes Working Group

 Centre For Education Information

This report is part of a series of publications based on the 2000 BC College and Institute Student Outcomes Survey. The reports are produced under the direction of the British Columbia Outcomes Working Group (OWG).

Below is a summary of the 2000 publications:

<i>The Highlights</i>	This 4-page bulletin provides a high level summary of selected 2000 survey results. Format: print publication and pdf document at http://outcomes.ceiss.org/
<i>2000 Key Student Outcomes Indicators for BC Colleges and Institutes: Survey Results by Institution (KOI)</i>	This report provides a summary of survey results by institution. Student Outcomes results for each of the 21 public colleges and institutes are presented along with summary information for all institutions combined. The data tables cover former student attributes, their level of satisfaction with their education and their further education and employment outcomes. Format: print publication and pdf document at http://outcomes.ceiss.org/
<i>2000 BC Student Outcomes: Summary of Survey Results by Program</i>	This summary report contains a high-level overview of the survey results, as well as survey results by program type and program area. The report presents the results for each program with a mix of numerical tables and graphics. Data on the following themes are presented: respondent attributes; employment and further education outcomes; satisfaction with skill development and college experiences and relation of studies to employment outcomes. Format: print publication and pdf document at http://outcomes.ceiss.org/
<i>2000 BC Student Outcomes: Survey Results by Detailed Program – web only</i>	This report contains survey results by program type, program area and field of study. The report presents the results for each program with a mix of numerical tables and graphics. Data on the following themes are presented: respondent attributes; employment and further education outcomes; satisfaction with skill development and college experiences and relation of studies to employment outcomes. Format: pdf document at http://outcomes.ceiss.org/
<i>2000 BC Student Outcomes: Job Destinations of Former College and Institute Students (JDR) – web only</i>	This report provides a detailed description of the kinds of jobs obtained by former students. The report presents the data in two views. The first view answers the question: in what occupations were students who exited from a particular field of study employed? The second view answers the question: from what field of study did students who found employment in a certain occupation come? Format: pdf document at http://outcomes.ceiss.org/

Note: students entering the post-secondary system are able to use Outcomes information to help them make their program selections by visiting the Opening Doors web site, available through www.ceiss.org or www.openingdoorsbc.com.

Please contact the Centre for Education Information at (250) 413-4400, or Tony Eder at teder@ceiss.org, for more information about Student Outcomes publications.

Survey Results
by Program Area**

**SECTION A:
OVERVIEW**

About the Student Outcomes Survey Project

The BC College and Institute Student Outcomes Survey Project collects and disseminates information about former students' post-secondary experiences and their subsequent labour market and further education transitions. The Student Outcomes survey is administered annually to a number of former students of public colleges and institutes in British Columbia. The findings serve to guide educational choices for future students, to help in assessing the success of the college and institute system in achieving its mandate, and to provide a solid basis for educational planning decisions.

This report is based on the Student Outcomes Survey conducted in the Spring of 2000. Former students were contacted by telephone 9-20 months after completing all, or a significant portion, of their educational program. Input was received from 20,468 former students from 21 public colleges and institutes; this represents 59 percent of the targeted 34,934 former students.¹

Participating Institutions:

British Columbia Institute of Technology (BCIT)
Camosun College (CAM)
Capilano College (CAP)
College of New Caledonia (CNC)
College of the Rockies (COTR)
Douglas College (DGL)
Emily Carr Institute of Art and Design (ECIAD)
Justice Institute (JINST)
Kwantlen University College (KWN)
Langara College (LANG)
Malaspina University-College (MAL)
Nicola Valley Institute of Technology (NVIT)
North Island College (NIC)
Northern Lights College (NLC)
Northwest Community College (NWCC)
Okanagan University College (OKN)
Open Learning Agency (OLA)
Selkirk College (SEL)
University College of the Cariboo (CAR)
University College of the Fraser Valley (FVAL)
Vancouver Community College (VCC)

The project is conducted with funding from the Ministry of Advanced Education, Training and Technology, and British Columbia's public colleges, university colleges and institutes. The British Columbia Outcomes Working Group (OWG) oversees all aspects of the project, from data collection through to the reporting of survey results. The OWG is a partnership between colleges and institutes and system bodies, such as the Ministry of Advanced Education, Training and

¹ See Appendix 2 for response rates by institution.

Technology, the Advanced Education Council of British Columbia and the BC Council on Admissions and Transfer.

Purpose of the Report

This report highlights the survey findings and presents results **by program area and program type**. Program area refers to subject matter groupings. Program type is a classification of the level of studies. The sixteen program areas, and definitions of the five program types used in this report are listed in Appendix C, page C-4.

How to Use the Tables

A three-page template displays information for collections of programs of similar content and duration delivered by any of the 21 institutions involved. The following information is presented for each program grouping:

- description of respondents;
- employment outcomes, i.e., labour force participation, nature of employment (part-time vs. full-time, permanent vs. temporary), and salary;
- further education outcomes;
- student evaluations of preparation in employability skills, quality of college experiences (such as teaching, library materials, etc.), and overall satisfaction with studies;
- labour market experiences, e.g., the length of job search, and the 10 most common training related occupations entered.

In this report, provincial totals are provided first, followed by totals for Applied programs, Arts and Sciences programs and Adult Basic Education programs.

Changes from Last Year

The following changes have been made to the layout and content of the 2000 edition of the BC Student Outcomes: Summary of Survey Results by Program Area:

- Former students were not asked to rate library material in the 2000 survey. Consequently, it does not appear in the College Experience section.
- Students were asked if their current job was related to previous work experience; therefore, as in 1998 and previous years, this percentage is reported in the Description of Survey Respondents section.

Key Findings

This section provides an overview of some of the key findings from the 2000 BC College and Institute Student Outcomes Survey.

Respondent Profile

Demographics

At the time of the interview, former students ranged in age from their late teens to 80 years old, with a median age of 25 years.

Female students made up about 55% of all former students surveyed. Arts and Sciences programs had a higher concentration of female students (61%) than Applied programs (52%).

Original Objective

Forty percent of respondents enrolled in their college or institute program to attain job skills; whereas 36 percent enrolled with an objective of obtaining a credential and 17 percent stated both credential attainment and job skills as their objectives for enrolling. Applied program respondents tended to emphasize job skills as their main reason for enrolling (52%), while respondents from Arts and Sciences emphasized credential attainment (61%). About 83 percent of respondents either "completely" or "mostly" met their objective for enrolling.

Previous Education

Eighty-nine percent of respondents had completed high school prior to enrolling in their college or institute; 7 percent of respondents had completed a university degree.

Employment Outcomes

Labour force participation

After completing their educational program, the majority of students joined, or remained in, the labour market; 85 percent of respondents were participating in the labour force when interviewed. The labour force includes people who are either working or looking for a job. For former students from career-oriented, or Applied programs, the labour force participation rate was 91 percent.

Employment

Seventy-three percent of all respondents were employed. Of those in the labour force, 65 percent were employed full-time, 21 percent were employed part-time and 14 percent were unemployed.

Relation of Studies to Employment

One indicator of the utility of programs designed to prepare students for job entry is the degree to which respondents consider their current job to be related to their educational training. Of respondents who were in the labour force, 53 percent were in a training-related job. Of the respondents from Applied programs who were in the labour force, 69 percent found employment that was training-related.

Not only did more Applied respondents report that they were in training-related jobs, but they also reported that their training was useful in both getting, and then performing their jobs. Eighty-five percent of respondents from Applied programs said their training was either "somewhat" or "very" useful to them in getting their job; 82 percent said it was "somewhat" or "very" useful to them in performing their job.

Further Education Outcomes

Forty-four percent of respondents continued their education in the first year after leaving their college or institute program. At the time of the interview, 38 percent of respondents were continuing their studies. Twenty-one percent of respondents had continued at a BC college or institute and 16 percent had transferred to a BC university. The rest had studied outside the province or through professional organizations or private training institutions in the province.

Respondents from Arts and Sciences programs were the most likely to continue their formal education; 65 percent were enrolled in further studies at the time of the interview, compared with 42 percent of Adult Basic Education and 25 percent of Applied program respondents. Approximately half of respondents from all three program areas (Applied, Arts and Sciences and Adult Basic Education) who continued their studies felt "very well prepared" for further studies.

College Experiences and Skill Development

Respondents gave high marks to most of their educational experiences. On a five-point scale (very good, good, adequate, poor, very poor), 36 percent rated the quality of teaching "very good", 43 felt it was "good" and 17 percent rated it "adequate", while only 3% and 1% rated the quality of teaching as "poor" or "very poor" respectively. When asked about the availability of instructors outside of class, 77 percent gave either a "very good" or "good" rating.

Respondents were very positive about the opportunity they were provided to develop skills in the areas of team work, and reading and comprehension. While Arts and Sciences respondents gave the highest marks to reading and comprehension, Applied and Adult Basic Education program respondents rated teamwork the best developed skill. Computer and entrepreneurial skills were identified as areas in which students were not as well prepared.

Overall Satisfaction

Eighty five percent of former students indicated that they were either "completely" or "mainly" satisfied with their studies.

**2000 BC Student Outcomes:
Summary of
Survey Results
By Program Area**

**SECTION C:
APPENDICES**

Appendix 1

Glossary of Terms

Adult Basic Education programs	Adult Basic Education programs are defined as those that provide education in predominantly "academic" subjects at the secondary school level or below. Operationally, ABE programs are defined to include students who have taken at least three courses that are included on the BC Articulation Grid.
Applied programs	Applied programs include all programs that are designed to lead to employment in a relatively specific field. For this survey, they include programs of 0 - 6 months duration, 7 - 12 months duration and 13 - 36 months duration, and the upper division of applied baccalaureate programs. All applied programs, e.g., engineering, business, nursing, education, social work, and criminology, are included regardless of whether the courses in the programs carry transfer credit.
Arts and Sciences programs	Arts and Sciences programs consist of courses in the liberal arts, humanities, social or physical sciences, and may lead to an associate or baccalaureate degree.
CIP codes	The Classification of Instructional Programs (CIP) is a comprehensive taxonomy of programs of instruction based on subject matter. It was developed by the US National Center for Education Statistics (NCES). It is becoming an accepted standard for the classification of post-secondary education programs in Canada.
Cohort population	The 21 participating colleges and institutes identified 34,934 <i>former students</i> for participation in the survey. These students completed all, or the majority, of their program of study and left their program at some point between July 1st, 1998 and June 30th, 1999.
Employed	Employed respondents are those who were working at a job or business at the time of the telephone interview.
Field of study	Institutionally defined programs are standardized to an instructional program classification (<i>CIP code</i>) and a standardized level of studies (<i>program type</i>). The combination of these two standardized elements defines a field of study, which is a grouping of similar college and institute programs.

Former students

This is the group of students who are included in the survey population. To be included in this group, students must have:

- earned a certificate or diploma; OR
- completed 75% of the credits required for a two year applied program; OR
- completed 100% of the credits required for a one year applied program; OR
- completed at least 24 credits of an arts and sciences program; OR
- completed at least 3 ABE courses;

AND

- not been enrolled in their college or institute program between July 1st, 1999 and February 1, 2000.

Institutionally defined programs or college programs

The instructional programs offered by each institution. These were standardized into Classification of Instructional Program (CIP) codes and Program Types.

Labour Force

The labour force includes people who are employed and those who are not employed, but who are looking for work.

National Occupation Classification (NOC)

The National Occupation Classification is a systematic taxonomy of occupations in the Canadian labour market. Please refer to Appendix 4 for additional detail.

Out-of-scope

"Out-of-scope" former students were students whose interview ended during the initial screening questions because they either did not attend the program or the institution, or who were still in the same program; or those student records that were duplicates; or those former students who were deceased by the time of attempted contact.

Program area	Subject matter groupings of instructional programs according to the first two digits of the six digit CIP code. The 16 program areas used in this report are: Adult Basic Education and Basic Skills Agriculture, Natural Resources & Science Technologies Arts and Sciences Business and Management Communications Computer and Information Services Construction and Precision Production Education and Library Science Engineering, Electrical and Electronics Health Related Legal and Social Mechanical and Related Nursing Recreation, Tourism, Hospitality and Service Transportation Visual, Performing and Fine Arts
Program type	This is a classification of institutionally defined programs that reveals the level of studies: 0-6 months. Programs of less than 6 months duration. These programs may require secondary school completion or equivalent for entry, or some other prerequisite. They may award a credential. 7-12 months. Programs between 7 and 12 months duration. These programs may require secondary school completion or equivalent for entry. They may award a certificate. They are not eligible for university credit. 13-36 months. Programs between 13 and 36 months duration. These programs require secondary school completion or equivalent for entry. They may be eligible for some university credit. They may award diplomas. Lower division. These are courses or clusters of courses normally carrying university credit at the first and second year level. They require secondary school completion or equivalent for entry. They may lead to an Associate or Baccalaureate degree. Upper division. These are courses or clusters of courses normally carrying university credit at the third, fourth or fifth year level. They require lower division credits or equivalent for entry. They lead to Baccalaureate degrees. Upper division also includes post-baccalaureate degrees, which require a baccalaureate for entry, but do not lead to a higher degree.

Respondent	A former student who responded to the 2000 BC College or Institute Outcomes Survey. Out of the 34,934 students surveyed, there were 20,468 respondents.
North American Industry Classification System (NAICS)	Industries are defined by the type of production (goods or services) an organization is involved in. The industry classification used in the Student Outcomes Survey was the North American Industry Classification System.
Training-related occupations	Occupations that the respondent describes as "very" or "somewhat" related to the respondent's previous studies.
Unable to contact	Former students who (1) could not be reached by telephone, i.e. respondent was unknown at given phone number, (2) did not have a current phone number, or a current phone number that could be obtained, or, (3) were no longer living in North America.
Unemployed	Respondents who were not employed at a job or business at the time of the interview, but who were looking for work.
Unemployment rate	The unemployment rate represents the number of unemployed respondents expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

Appendix 2

Response Rates by Institution

The provincial survey response rates for the 2000 BC College and Institute Student Outcomes Survey are shown, by institution, below.

**2000 BC College and Institute Student Outcomes Survey Response Rates,
By Institution**
